Joseph D. Kostmayer

October 1, 2018

Law Offices of Joseph D. Kostmayer
95 S Market St, Ste 300
San Jose

Dear Mr. Kostmayer,

As a paralegal I would bring my skill set in philosophical reasoning, technology, and mathematics as well as my enthusiasm for problem-solving.

With regards to client acquisition: I am knowledgeable in the administration of websites. I am capable of creating and maintaining a solid web presence for the firm which would make it easier for potential clients to find it. I know of various database systems and how they might be used to keep track of which clients are involved with the firm.

With regards to law office management: I can troubleshoot almost any technical issue that might arise; computers like me and I am comfortable with adapting to new technologies. As such, I would be able to help a transition to a new software platform if it arose. I would also be capable of working with billing (which is largely a matter of multiplication and spreadsheet entry).

With regards to legal argumentation: My training in philosophy involved a great deal of definitional nitpicking, work with technical subjects, close reading of texts and, of course, arguing for positions. In combination with mathematics I have a strong grasp of logic. I would be an effective sounding board for brainstorming in discussions.

Yours respectfully,

David Vaillant
